Docket No.:

112843-043

Commissioner for Patents Washington, DC 20231

PRELIMINARY AMENDMENT

Sir:

Please amend the above-identified patent application as follows:

In the Specification:

Please amend page 1, line 1, by deleting "Composition Comprising Casein Protein & Whey Protein" and substitute the following:

--SPECIFICATION

TITLE OF THE INVENTION

"COMPOSITION COMPRISING CASEIN PROTEIN AND WHEY PROTEIN"--

On page 2, line 14, please add the following:

--SUMMARY OF THE INVENTION--

On page 3, line 17, please insert the following:

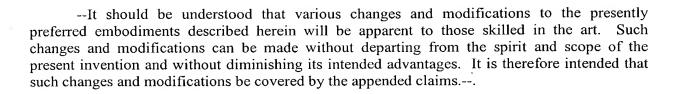

--Additional features and advantages of the present invention will be described in and apparent from the detailed description of the presently preferred embodiments and the figures.

DETAILED DESCRIPTION OF THE INVENTION

The present invention provides, in an embodiment, improved infant formula.--

On page 8, please delete line 31 and substitute --By way of example and not limitation, examples of the present invention will now be given.--

On page 9, line 27, please insert the following:

In the Claims:

Please amend Claims 1 and 3-10 as follows:

1. A composition for an infant formula comprising:

whey protein, wherein the whey protein is acid or sweet whey protein from which caseino-glyco-macropeptide has been removed; casein protein; free arginine; free histidine; tryptophan rich milk protein, free tryptophan or a mixture thereof.

- 3. A composition according to claim 1 which comprises about 1.5% to about 3% by weight of arginine; tryptophan and histidine.
- 4. A composition according to claim 1 which comprises a lipid source, a carbohydrate source, and a protein source.
 - 5. A composition according to claim 1 wherein the whey protein is non-hydrolysed.
- 6. A composition according to claim 1 wherein the whey protein is sweet and is substantially free of lactose.
- 7. A composition according to claim 1 which comprises about 6% to about 50% by weight of whey protein and about 20% to about 40% casein protein.
- 8. A composition according to claim 1 which comprises about 0% to about 0.1% by weight histidine, about 0.1% to about 0.3% by weight arginine, and about 0.3 to about 0.5% by weight tryptophan.
- 9. A composition according to claim 1 which comprises about 0.2% to about 0.4% by weight histidine, about 1% to about 2% by weight arginine, and about 0.2% to about 0.4% by weight typtophan.
- 10. A method of producing an infant formula comprising the step of blending whey protein, that does not contain caseino-glyco-macropeptide, and casein protein together with free arginine; free histidine; and tryptophan rich milk protein, free tryptophan or a mixture thereof and homogenising the blended mixture.

Please cancel Claim 11 without prejudice or disclaimer.

12. A method of treating malnutrition comprising the step of administering an effective amount of a composition containing whey protein, wherein the whey protein is acid or sweet whey protein from which caseino-glyco-macropeptide has been removed; casein protein; free arginine; free histidine; tryptophan rich milk protein, free tryptophan or a mixture thereof.

Please add newly-submitted Claims 13-20 as follows:

13. An infant formula comprising:

whey protein, from which caseino-glyco-macropeptide has been removed;

casein protein;

free arginine;

free histidine; and

tryptophan rich milk protein, free tryptophan and mixtures thereof.

- 14. The infant formula of claim 13 comprising from about 9.0 to about 10.0 w/w% of protein.
- 15. The infant formula of claim 13 comprising about 1.5% to about 3% by weight of arginine; tryptophan and histidine.
- 16. The infant formula of claim 13 comprising a lipid source, a carbohydrate source, and a protein source.
- 17. The infant formula of claim 13 comprising about 6% to about 50% by weight of whey protein and about 20% to about 40% casein protein.
- 18. The infant formula of claim 13 comprising about 0.1% to about 0.3% by weight arginine, and about 0.3 to about 0.5% by weight tryptophan.
- 19. The infant formula of claim 13 comprising about 0.2% to about 0.4% by weight histidine, about 1% to about 2% by weight arginine, and about 0.2% to about 0.4% by weight tyrptophan.
- 20. A method of providing nutrition to an infant comprising the step of administering an effective amount of a composition comprising whey protein, wherein the whey protein is acid or sweet whey protein from which caseino-glyco-macropeptide has been removed; casein protein; free arginine; free histidine; tryptophan rich milk protein, free tryptophan or a mixture thereof.

REMARKS

This Preliminary Amendment is submitted in the above-identified patent application. Pursuant to a Preliminary Amendment, Claims 1, 3-10 and 12 have been amended, Claim 11 has been canceled, newly-submitted Claims 13-20 have been added and minor amendments have been made to the specification. This Preliminary Amendment does not add new subject matter. Applicants also note for the record the purpose of the Preliminary Amendment is to place the claims in proper format and/or add new claims. Therefore, Applicants do not intend to disclaim any subject matter in view of this Preliminary Amendment.

Attached hereto is a marked-up version of the changes made to the specification and claims by the current amendment. The attached page is captioned "Versions with Markings to Show Changes Made."

Respectfully submitted,

BELL, BOYD & LLOYD LLC

Robert M. Barrett

VERSION WITH MARKINGS TO SHOW CHANGES MADE

In the Specification:

Please amend page 1, line 1, by deleting "Composition Comprising Casein Protein and Whey Protein" and substitute the following:

--SPECIFICATION

TITLE OF THE INVENTION

"COMPOSITION COMPRISING CASEIN PROTEIN AND WHEY PROTEIN"--

On page 2, line 14, please add the following:

--SUMMARY OF THE INVENTION--

On page 3, line 17, please insert the following:

--Additional features and advantages of the present invention will be described in and apparent from the detailed description of the presently preferred embodiments and the figures.

DETAILED DESCRIPTION OF THE INVENTION

The present invention provides, in an embodiment, improved infant formula.--

On page 8, please delete line 31 and substitute --By way of example and not limitation, examples of the present invention will now be given.--

On page 9, line 27, please insert the following:

--It should be understood that various changes and modifications to the presently preferred embodiments described herein will be apparent to those skilled in the art. Such changes and modifications can be made without departing from the spirit and scope of the present invention and without diminishing its intended advantages. It is therefore intended that such changes and modifications be covered by the appended claims.--.

In the Claims:

Please amend Claims 1 and 3-10 as follows:

1. (Amended) A composition for an infant formula [which comprises] comprising:

whey protein, wherein the whey protein is acid or sweet whey protein from which caseino-glyco-macropeptide has been removed; casein protein; free arginine; free histidine; tryptophan rich milk protein, free tryptophan or a mixture thereof.

- 3. (Amended) A composition according to [any preceding] claim 1 which comprises about 1.5% to about 3% by weight of arginine; tryptophan and histidine.
- 4. (Amended) A composition according to [any preceding] claim <u>1</u> which comprises a lipid source, a carbohydrate source, and a protein source.
- 5. (Amended) A composition according to [any preceding] claim 1 wherein the [which comprises] whey protein [which] is non-hydrolysed.
- 6. (Amended) 'A composition according to [any preceding] claim 1 wherein the [sweet] whey protein is sweet and is substantially free of lactose.
- 7. (Amended) A composition according to [any preceding] claim <u>1</u> which comprises about 6% to about 50% by weight of whey protein and about 20% to about 40% casein protein.
- 8. (Amended) A composition according to [any preceding] claim <u>1</u> which comprises about 0% to about 0.1% by weight histidine, about 0.1% to about 0.3% by weight arginine, and about 0.3 to about 0.5% by weight tryptophan.
- 9. (Amended) A composition according to [any preceding] claim <u>1</u> which comprises about 0.2% to about 0.4% by weight histidine, about 1% to about 2% by weight arginine, and about 0.2% to about 0.4% by weight tyrptophan.
- 10. (Amended) A method of producing <u>an infant formula comprising</u> [a composition according to any preceding claim which comprises] the step of blending whey protein, that does not contain caseino-glyco-macropeptide, and casein protein together with free arginine; free histidine; and tryptophan rich milk protein, free tryptophan or a mixture thereof and homogenising the blended mixture.

Please cancel Claim 11 without prejudice or disclaimer.

Please amend Claim 12 as follows:

12. (Amended) A method of [addressing] <u>treating</u> malnutrition [which comprises] <u>comprising the step of</u> administering an effective amount of a composition <u>containing whey protein</u>, wherein the whey protein is acid or sweet whey protein from which caseino-glyco-macropeptide has been removed; casein protein; free arginine; free histidine; tryptophan rich milk protein, free tryptophan or a mixture thereof [according to any one of claims 1 to 10].

Appl. No. PCT/EP00/08910

13. An infant formula comprising:

whey protein, from which caseino-glyco-macropeptide has been removed;

casein protein;

free arginine;

free histidine; and

tryptophan rich milk protein, free tryptophan and mixtures thereof.

- 14. The infant formula of claim 13 comprising from about 9.0 to about 10.0 w/w% of protein.
- 15. The infant formula of claim 13 comprising about 1.5% to about 3% by weight of arginine; tryptophan and histidine.
- 16. The infant formula of claim 13 comprising a lipid source, a carbohydrate source, and a protein source.
- 17. The infant formula of claim 13 comprising about 6% to about 50% by weight of whey protein and about 20% to about 40% casein protein.
- 18. The infant formula of claim 13 comprising about 0.1% to about 0.3% by weight arginine, and about 0.3 to about 0.5% by weight tryptophan.
- 19. The infant formula of claim 13 comprising about 0.2% to about 0.4% by weight histidine, about 1% to about 2% by weight arginine, and about 0.2% to about 0.4% by weight tyrptophan.
- 20. A method of providing nutrition to an infant comprising the step of administering an effective amount of a composition comprising whey protein, wherein the whey protein is acid or sweet whey protein from which caseino-glyco-macropeptide has been removed; casein protein; free arginine; free histidine; tryptophan rich milk protein, free tryptophan or a mixture thereof.

WO 01/22837 PCT/EP00/08910

Composition Comprising Casein Protein & Whey Protein

This invention relates to a composition for an infant formula which comprises casein protein and whey protein; a method of producing the composition; use of the composition in the manufacture of a medicament or nutritional product for addressing malnutrition; and a method of addressing malnutrition which comprises administering an effective amount of the composition.

Within the context of this application the word "comprises" is taken to mean "includes, among other things" and it is not intended to mean "consists of only".

Mother's milk is recommended for all infants. However, in some cases mother's milk is not available and infant formulae must be used. Normal, full-term infants are usually fed cow's-milk-based formulas. These formulas contain a mixture of casein and whey as protein sources and they provide nutrition for infants, however they do not provide a protein concentration and an amino acid profile equivalent to that of mother's milk. In addition these standard formulae are not suitable for pre-term infants and those having adverse reactions to protein in cow's milk formula or to lactose.

20

5

10

15

An alternatives to cow's milk formula is soy formula; particularly for infants who are lactose intolerant. However, soy is not as good a protein source as cow's milk. Also, infants do not absorb some minerals, such as calcium, as efficiently from soy formulae.

25

30

35

A further alternative formula is based on hydrolysed protein. These formulas are hypoallergenic and have a decreased likelihood of an allergic reaction.

Ideally, to be as close as possible to human milk, the protein in infant formulae may be derived from both whey and casein in an appropriate ratio. However, a problem with conventional formulae having these proteins is that they have a high protein concentration to ensure that the infant gets the necessary amount of all essential amino acids. The protein concentration is higher than the concentration normally found in human milk and it may not be beneficial for an infant because an infant's metabolism is susceptible to overloading with nitrogen from its protein intake.

To address this problem, formulae having improved amino acid profiles have been suggested, for example those having hydrolysed whey proteins. The whey protein may be acid whey protein or sweet whey protein. In general, acid whey protein is preferred from a nutritional point of view since it has a lower threonine content and this is closer to that of human milk. However, until now it has not been possible to provide the advantage of a composition having a protein concentration equivalent to the concentration in human milk and a good amino acid profile in formulae having whey protein and casein. An advantage provided by casein in formulae is that it has the ability to form curd which enhances the feeling of satiety.

The present invention addresses the problems set out above.

5

10

30

- Accordingly, the invention provides a composition for an infant formula which comprises whey protein; casein protein; free arginine; free histidine; and tryptophan rich milk protein, free tryptophan or a mixture thereof.
- In a second aspect the invention provides a method of producing the composition which comprises the step of blending whey protein and casein protein together with free arginine; free histidine; and tryptophan rich milk protein, free tryptophan or a mixture thereof and homogenising the blended mixture.
- In a third aspect the invention provides use of an embodiment of the composition in the manufacture of a medicament or nutritional product for addressing malnutrition.
 - In a forth aspect the invention provides a method of addressing malnutrition which comprises administering an effective amount of an embodiment of the composition.
 - Preferably, tryptophan rich milk protein has a level of about 5% or more of amino acids as tryptophan. More preferably it is about 10% or more.
- Preferably, the whey protein is acid whey protein or sweet whey protein from which caseino-glyco-macropeptide has been removed. This provides the

advantage of a reduced threonine content and an increased tryptophan content as compared to normal sweet whey and is therefore suitable as a protein source for infants.

- Preferably an embodiment of the composition comprises from about 9.0 to about 10.0 w/w% of protein, more preferably about 9.5% w/w%. This corresponds to about 1.8g protein /100kcal. An advantage provided by this concentration of protein is that it is equivalent to the amount of protein generally present in human milk and it corresponds to the lower limit tolerated by codex alimentarius.
- Preferably an embodiment of the composition comprises about 0.5% to about 3% by weight of arginine; tryptophan and histidine. Suprisingly, it has been found that by supplementing the sweet whey fraction with the free amino acids arginine, tyrosine, and histidine, the protein source has an amino acid profile which is close to that of human milk.
 - Preferably an embodiment of the composition comprises a lipid source, a carbohydrate source, and a protein source. This provides the advantage that the composition is as close as possible in content to mothers milk.
 - Preferably an embodiment of the composition comprises whey protein which is non-hydrolysed. In alternative embodiments it is hydrolysed.
- Preferably, the sweet whey fraction is substantially free of lactose. This has the advantage that the infant formula has reduced levels of lysine blockage.
 - Preferably an embodiment of the composition comprises about 6% to about 50% by weight of whey protein, more preferably about 20% to 40% whey protein, most preferably 30% whey protein. Preferably it comprises from about 20% to about 40% casein protein, more preferably about 30%. Most preferably, the ratio of whey protein to casein protein is about 60%:about 40% to about 70%:about 30%.
 - Preferably the free amino acids are in free base form.

ġ

30

10

20

In one embodiment the composition is suitable for a pre-term infant formula and comprises about 0% to about 0.1% by weight histidine, about 0.1% to about 0.3% by weight arginine, and about 0.3 to about 0.5% by weight tryptophan.

- In an alternative embodiment the composition is suitable for a full-term, hypoallergenic infant formula in which the protein source preferably comprises about 0.2% to about 0.4% by weight histidine, about 1% to about 2% by weight arginine, and about 0.2% to about 0.4% by weight tryptophan.
- 10 Preferably the concentration of tryptophan in the composition is at least about 135mg/g and the concentration of threonine in the composition is less than about 350mg/g. Preferably the threonine concentration corresponds to about 4.9 g per 100g protein to about 5.1g per 100g protein.
- The carbohydrate source may include lactose. The lactose may be the sole source of carbohydrates.
 - Embodiments of the invention are now described by way of example.
- The invention provides a composition for an infant formula which comprises arginine, tryptophan, histidine and a sweet whey fraction from which caseino-glyco-macropeptide has been removed. The infant formula may be used for preterm or full-term infants.
- The sweet whey used in the protein source may be obtained from cheese making, particularly the sweet whey obtained after the coagulation of casein by rennet. The sweet whey may then be processed as desired. For example, the sweet whey may be treated to remove minerals (cations, anions), lactose, or any of these substances. The sweet whey may be concentrated as desired. Suitable sweet whey sources are commercially available. It is particularly preferred that the sweet whey is substantially lactose-free.
- The sweet whey is then treated to remove caseino-glyco-macropeptide. This may be accomplished by any suitable process. One suitable process is described in European patent application 0880902, the disclosure of which is incorporated by reference. In this process, the pH of the sweet whey is adjusted to 1 to 4.3, if

necessary. The sweet whey is then contacted with a weakly anionic resin which is predominantly alkaline until the pH of the sweet whey stabilises at about 4.5 to 5.5. The sweet whey fraction from which the caseino-glyco-macropeptide has been removed, is then collected.

5

In an embodiment of the composition the whey protein is non-hydrolysed. In an alternative embodiment, the sweet whey fraction is hydrolysed to prevent allergic reactions in infants at risk and to make the protein easier to digest. The hydrolysis process may be carried out as desired and as is known in the art. In general, the whey protein hydrolysate is prepared by enzymatically hydrolysing the sweet whey fraction in one or more steps. For example, for an extensively hydrolysed protein, the sweet whey proteins may be subjected to triple hydrolysis using, for example, Alcalase 2.4L (EC 940459), then Neutrase 0.5L (obtainable from Novo Nordisk Ferment AG) and then pancreatin at 55°C. Alternatively, for a less hydrolysed protein, the sweet whey may be subjected to double hydrolysis using, for example, NOVOZYMES and then pancreatin.

15

20

10

If the sweet whey fraction used is substantially lactose free, it is found that the protein is subjected to much less lysine blockage during the hydrolysis process. This enables the extent of lysine blockage to be reduced from about 15% by weight of total lysine to less than about 10% by weight of lysine; for example about 7% by weight of lysine. This greatly improves the nutritional quality of the protein source.

25

The free amino acids L-arginine, L-tyrptophan and L-histidine are included in the protein source. Preferably, they are in the form of free amino acids and make up about 1.5% to about 3% by weight of the protein source. For example, the free amino acids may make up about 2% to about 2.6% by weight of the protein source.

30

35

In particular, for pre-term formulas, histidine preferably provides about 1% to about 1.5% by weight, arginine preferably provides about 0.6% to about 0.9% by weight, and tyrptophan preferably provides about 0.3% to about 0.5% by weight, of the protein source. For hypoallergenic formulas, histidine preferably provides about 0.2% to about 0.4% by weight, arginine preferably provides about 1% to

5

10

15

20

30

35

PCT/EP00/08910

about 2% by weight, and tyrptophan preferably provides about 0.2% to about 0.4% by weight, of the protein source.

The protein source may include other free amino acids as desired.

The carbohydrate source in the infant formula can be carbohydrate suitable for use in infant formulas. Preferred carbohydrate sources are selected from the group which comprises sucrose, maltodextrin, maltose, lactose, corn syrup, corn syrup solids, rice syrup solids, rice starch, and the like. Preferably, the carbohydrate source includes lactose and maltodextrin. The lactose is preferably free of any allergens. For full term formulas, the carbohydrate source is preferably lactose.

The lipid source may be any lipid or fat which is suitable for use in infant formulas. Preferred lipid sources include milk fat, safflower oil, egg yolk lipid, canola oil, olive oil, coconut oil, palm oil, palm kernel oil, palm olein, soybean oil, sunflower oil, fish oil, and microbial fermentation oil containing long-chain, polyunsaturated fatty acids. These oils may be in the form of high oleic forms such as high oleic sunflower oil and high oleic safflower oil. The lipid source may also be in the form of fractions derived from these oils such as palm olein, medium chain triglycerides (MCT), and esters of fatty acids such as arachidonic acid, linoleic acid, palmitic acid, stearic acid, docosahexaeonic acid, linolenic acid, oleic acid, lauric acid, capric acid, caproic acid, and the like.

For pre-term formulas, the lipid source preferably contains medium chain triglycerides; for example in an amount of about 15% to about 35% by weight of the lipid source.

The lipid source preferably has a ratio of n-6 to n-3 fatty acids of about 5:1 to about 15:1; for example about 8:1 to about 10:1.

The infant formula may further comprise ingredients which are designed to meet the nutritional needs of a human infant. In particular, it is preferred that the infant formula is "nutritionally complete"; that is it contains adequate nutrients to sustain healthy human life for extended periods. WO 01/22837

5

10

15

20

25

30

35

-7-

The amount of protein per 100 kcal of formula is typically about 1.8g to about 4.5 g; for example about 1.8 g to about 4 g. For full term hypoallergenic formulas, the amount may be about 1.8 g/100 kcal to about 2.5 g/100 kcal. In order to reduce protein loading, the amount may be less than about 2 g/100 kcal. For pre-term formulas, the amount may be about 2.5 g/100 kcal to about 4 g/100 kcal.

The amount of lipid source per 100 kcal of formula may be about 3.3 g to about 6.5 g; for example about 4.4 g to about 6.5g. The amount of carbohydrate source per 100 kcal of total formula is typically about 7 g to about 14 g.

When in nutritionally complete form, the infant formula contains all vitamins and minerals understood to be essential in the daily diet and in nutritionally significant amounts. Minimum requirements have been established for certain vitamins and minerals. Examples of minerals, vitamins and other nutrients optionally present in the infant formula include vitamin A, vitamin B₁, vitamin B₂, vitamin B₆, vitamin B₁₂, vitamin E, vitamin K, vitamin C, vitamin D, folic acid, inositol, niacin, biotin, pantothenic acid, choline, calcium, phosphorous, iodine, iron, magnesium, copper, zinc, manganese, chloride, potassium, sodium, selenium, chromium, molybdenum, taurine, and L-carnitine. Minerals are usually added in salt form. The presence and amounts of specific minerals and other vitamins will vary depending on the intended infant population.

If necessary, the infant formula may contain emulsifiers and stabilisers such as soy lecithin, citric acid esters of mono- and di-glycerides, and the like. This is especially the case if the formula is provided in liquid form.

The infant formula may optionally contain other substances which may have a beneficial effect such as fibres, lactoferrin, nucleotides, nucleosides, and the like.

The infant formula may be prepared in any suitable manner. For example, for an infant formula may be prepared by blending together the protein source, the carbohydrate source, and the fat source in appropriate proportions. If used, the emulsifiers may be included in the blend. The vitamins and minerals may be added at this point but are usually added later to avoid thermal degradation. Any lipophilic vitamins, emulsifiers and the like may be dissolved into the fat source

5

20

30

prior to blending. Water, preferably water which has been subjected to reverse osmosis, may then be mixed in to form a liquid mixture.

- The liquid mixture may then be thermally treated to reduce bacterial loads. For example, the liquid mixture may be rapidly heated to a temperature in the range of about 80°C to about 110°C for about 5 seconds to about 5 minutes. This may be carried out by steam injection or by heat exchanger; for example a plate heat exchanger.
- The liquid mixture may then be cooled to about 60°C to about 85°C; for example by flash cooling. The liquid mixture may then be homogenised; for example in two stages at about 7 MPa to about 40 MPa in the first stage and about 2 MPa to about 14 MPa in the second stage. The homogenised mixture may then be further cooled to add any heat sensitive components; such as vitamins and minerals. The pH and solids content of the homogenised mixture is conveniently standardised at this point.
 - If it is desired to produce a powdered infant formula, the homogenised mixture is transferred to a suitable drying apparatus such as a spray drier or freeze drier and converted to powder. The powder should have a moisture content of less than about 5% by weight.
- If it is desired to produce a liquid infant formula, the homogenised mixture is filled into suitable containers; preferably aseptically. However, the liquid infant formula may also be retorted in the container. Suitable apparatus for carrying out filling of this nature is commercially available. The liquid infant formula may be in the form of a ready to feed formula having a solids content of about 10 to about 14% by weight or may be in the form of a concentrate; usually of solids content of about 20 to about 26% by weight.

Specific examples of the invention are now described for illustration.

Example 1

A sweet whey protein concentrate is dissolved in deionised water and the pH is adjusted to 4.25 by contacting the solution with a cation exchange

5

10

15

20

PCT/EP00/08910

resin (IMAC HP 1100 E, Rohm and Haas). The solution is treated with a weakly anionic resin (IMAC HP 661, Rohm & Haas, which has been regenerated in OH form) for about 6 hours at 8°C. Once the pH reaches about 5.25 and does not change, the solution is recovered. Over 85% of the caseino-glyco-macropeptide originally present has been removed from the solution.

b) The solution of step a) is standardised in demineralised water at 55°C. The solution is then heated to 75°C for 20 seconds. The pH of the solution is adjusted to 7.5 by the addition of Ca(OH)₂ and a solution of NaOH and KOH.

The reaction mixture is then subjected to microfiltration and ultrafiltration and then dried by lyophilisation and packaged into metal cans. The protein has low levels of lysine blockage with 6.9% blocked lysine and 9% reactive lysine.

c) The protein of step b) is combined with 0.72% by weight L-arginine, 0.44% by weight of L-tyrptophan, and 1.38% by weight of L-histidine. The mixture is formulated into a powdered infant formula. The infant formula has the following composition:

| Component | Amount |
|--------------------------------------------|---------------------|
| Milk SNF | 8-10% |
| Whey protein | 6-50% |
| Alpha-lactalbumin rich whey protein source | 0-2% |
| Arginine | 0.1-0.3% |
| Histidine | 0-0.1% |
| Fat | 25-30% |
| Lactose | 10-40% |
| Vitamins and minerals | To meet regulations |

The composition has a protein concentration of 9.5 w/w% or 1.8g protein /100kcal.

Amended claims

- 1. A composition for an infant formula which comprises whey protein, wherein the whey protein is acid or sweet whey protein from which caseino-glyco-macropeptide has been removed; casein protein; free arginine; free histidine; and tryptophan rich milk protein, free tryptophan or a mixture thereof.
- 2 3. A composition according to claim 1 br 2 which comprises from about 9.0 to about 10.0 w/w% of protein
- 3 4. A composition according to any preceding claim which comprises about 1.5% to about 3% by weight of arginine; tryptophan and histidine.
- 45. A composition according to any preceding claim which comprises a lipid source, a carbohydrate source, and a protein source.
- 5 %. A composition according to any preceding claim which comprises whey protein which is non-hydrolysed.
- 67. A composition according to any preceding claim wherein the sweet whey protein is substantially free of lactose.
- 7. 8. A composition according to any preceding claim which comprises about 6% to about 50% by weight of whey protein and about 20% to about 40% casein protein.
- 8 %. A composition according to any preceding claim which comprises about 0% to about 0.1% by weight histidine, about 0.1% to about 0.3% by weight arginine, and about 0.3 to about 0.5% by weight tryptophan.
- 9 10. A composition according to any preceding claim which comprises about 0.2% to about 0.4% by weight histidine, about 1% to about 2% by weight arginine, and about 0.2% to about 0.4% by weight tyrptophan.

- 10 11. A method of producing a composition according to any preceding claim which comprises the step of blending whey protein and casein protein together with free arginine; free histidine; and tryptophan rich milk protein, free tryptophan or a mixture thereof and homogenising the blended mixture.
- M 12. Use of a composition according to any one of claims 1 to 10 in the manufacture of a medicament or nutritional product for addressing malnutrition.
- 12 13. A method of addressing malnutrition which comprises administering an effective amount of a composition according to any one of claims 1 to 10.

(54) Title: COMPOSITION COMPRISING CASEIN PROTEIN AND WHEY PROTEIN

(57) Abstract: A composition for an infant formula which comprises casein protein and whey protein; a method of producing the composition; use of the composition in the manufacture of a medicament or nutritional product for addressing malnutrition; and a method of addressing malnutrition which comprises administering an effective amount of the composition. A preferred embodiment of the composition comprises non-hydrolysed protein, free arginine; tryptophan and histidine, a lipid source and a carbohydrate source. In addition, the whey protein is acid whey protein or sweet whey protein from which caseino-glycomacropeptide has been removed.

DECLARATION AND POWER OF ATTORNEY FOR PATENT APPLICATION

As a below named inventor, I hereby declare that:

My residence, post office address and citizenship are as stated below next to my name,

I believe I am the original, first and sole inventor (if only one name is listed below) or an original, first and joint inventor (if plural names are listed below) of the subject matter which is elaimed and for which a patent is sought on the invention entitled:

| the specification of which: (check one) is attached hereto. was filed on 12 September 2000, as United States Application No. or PCT International Application No. PCT/EP00/08910 and was amended on (if applicable). I hereby state that I have reviewed and understand the contents of the above-identified specification, including the claims, as amended by any amendment referred to above. I acknowledge the duty to disclose to the United States Patent Office all information which is known to me to be material to the patentability of this application in accordance with Title 37, Code of Federal Regulations, 1.56. I hereby claim foreign priority benefits under Title 35, United States Code Section 119 or Section 365(b) of any foreign application(s) for patent or inventor's certificate, or Section 365(a) of any PCT international application which designated at least one country other than the United States, listed below and have also identified below, by checking the box, any foreign application for patent or inventor's certificate or PCT international application having a filing date before that of the application on which priority is claimed.
